

Heritage Glenn Townhomes Tree Inventory Management Prioritization

MAP:	Refers to the Map Number per tree
Species:	Common names are given, not scientific names
DBH:	Diameter at Breast Height (measured at 4.5 feet from the ground), in inches
Condition:	<ul style="list-style-type: none"> 1 - Specimen Tree 2 - Good Condition 3 - Fair Condition 4 - Poor Condition (likely dead or dying)
Priority Rating:	Rated from 1 (recommend prompt action) to 4 (can wait, but do not forget about it!)
Remove:	Remove whole tree. How soon depends on Priority Rating assigned. Marked with an "X" if recommended. In some cases, there may also be some recommended pruning, if needed to be done sooner than the removal.
Pruning:	Refers to the recommended pruning activity per plant. It will have a <i>Pruning Level</i> (refers to the smallest branch that the pruning activity will encompass) followed by a <i>Pruning Objective</i> (refers to the objectives of the pruning activity)
Pruning Level:	<ul style="list-style-type: none"> FT - Fine Thinning: Remove dead, diseased, broken, rubbing limbs and some light overall thinning. Smallest branch is 0.5" (diameter) MT - Medium Thinning: Same as above, but smallest limb is 1" (diameter) CT - Coarse Thinning: Same as above, but smallest limb is 2" (diameter)
Pruning Objective:	<ul style="list-style-type: none"> CLR (clear the building or other permanent structure) DW (deadwood pruning) WEIGH (weight reduction pruning) RAI (raise lowest branches to the recommended height) HEALTH (concerns about health of the tree) STRUCT (concerns about tree structure and architecture) HAZARD (tree poses a high risk)
Raise:	Prune up lowest branches to a specified height (in feet; it is approximate, based on individual branch architecture)
Clear:	Prune branches away from a building or other permanent structure to a specified distance (in feet; it is approximate, based on individual branch architecture)
Comments:	Tree-specific comments that are relevant to help explain a priority rating or other significant issues
